Track.
Locate.
Geofence.
Detect movement.
Measure impact.
Monitor temperature.
Add your sensors.
LOKA has developed a revolutionary solution that gives conscience to your Business Assets.

The IoT Solution includes a connected Devices and a Cloud Platform with Geolocation capabilities.
The LOKA Devices sensors do readings of the surrounding environment, **indoor and outdoor**, and data is then transmitted to the IoT cloud platform, using Sigfox, Bluetooth or Wi-Fi connectivity, according to your personalized notifications.

The data can be anything, from temperature, to battery values, to movement detection, and geolocation information.
The **LOKA Device Manager** interprets and translates the data received from the devices, to present it in a user-friendly interface.

It enables you to track and get information on any asset, or thing, you want to monitor.
The **Sigfox network** is the world’s leading provider of narrow-band connectivity for the Internet of Things (IoT).

Sigfox provides extremely price-competitive connectivity subscriptions and even more importantly, enables extremely simple and cost-efficient silicon modules.
How it works

Measure Temperature  Detect Motion  Wi-fi Sniffing  Bluetooth Geofencing

sigfox

Track and Trace  Get notified of changes  Reporting  API Integration
Get information on any logistics things you want to monitor.
Now, imagine you have one of LOKA’s devices. Or a lot of them.
Apply the LOKA Device to:

- Containers
- Shipping crates
- Pallets
- Vehicles
- Equipment
- High value cargo
In the LOKA MIND, all devices can be managed separately, or in predefined groups. You can monitor:

- Location & Geofencing
- Temperature
- Movement
- Battery
LOKA MIND enables the configuration of the devices to operate in four different modes:

- **MOVEMENT**
- **TRACKER**
- **TEMPERATURE**
- **TRACKER & TEMPERATURE**

Each operating mode uses a different trigger (location, temperature or movement), to make the device send messages.

Most times, the sent message includes the same type of information in all of the operating modes: the difference lies in which of the sensors triggers the message.

The LOKA MIND is your device manager that provides all the information on your device activity, from location, sensors and values, to battery voltage.

You can filter, create your own reports and export data, or even use the API to seamlessly integrate the data on your own platform.
This is how we show you your devices’ Location.

The LOKA IoT solution provides geolocation information, both outdoors and indoors, without requiring a GPS.

The solution is based on the Sigfox technology and Wi-Fi sniffing, enabling unparalleled low power, with a wide communication range.

Each location is composed of a coordinate (center point) and an accuracy radius, meaning the device is inside the green circle.

You can see your device location in a given time range, or choose to see just the last known location.
Here is an example of Notifications that you can configure, in order to receive alerts.

The LOKA IoT Solution enables the configuration of notifications for every device sensor (temperature, movement, voltage) and the device location (Geofencing).

With the Geofencing functionality, the LOKA Device Manager can send you alerts whenever one device arrives or leaves a given area (eg. your offices).
Here is an example of Temperature Notifications you can receive.

You will define that you want to be alerted every time the device registers a temperature above 25ºC. So here you received the notification because your asset’s temperature reached 30ºC. And that notification was closed when it regulated back to 25ºC.
LOGISTICS WITH LOKA GAIN CONSCIENCE OF:

✓ containers, pallets, vehicles, equipment and high value cargo, by tracking, locating and monitoring them;

✓ how your equipment is being used;

✓ environmental conditions that your assets were exposed.
**BENEFITS FOR LOGISTICS**

- **IMPROVE EFFICIENCY OF YOUR TRANSPORT EQUIPMENT**
  - if you know where your containers, shipping crates or racks are, you can optimize their use;

- **OPTIMIZE YOUR PROCESSES**
  - by receiving updated information on your assets, as well as your customers’ cargo, you can introduce efficiency in your internal operational processes;

- **INTRODUCE NEW REVENUE STREAMS**
  - offer new services to your customers, by providing them with updated information on their assets, thus increasing your company’s trust and reliability;

- **PREVENT LOSS AND THEFT OF YOUR ASSETS**
  - track and trace your assets, find them in case of loss or theft, and cut replacement costs.
Business Model

LOKA PRIMIS device acquisition
Ranging from 16,00 to 39,50 EUR per device, pricing is dependent on order volume.
With acquisition of the device, we offer the LOKA Mind subscription and geolocation service fee for the first year.

Annual LOKA MIND - device manager Fee
After the first year, an annual service fee applies, per device and per year, for the usage of the IoT Cloud Platform and Geolocation services. Ranging from 0,50 to 2,50 EUR, pricing is dependent on order volume.
This service includes online and remote Support services.

Sigfox Connectivity
LOKA delivers the devices with Sigfox connectivity included. Or you can contact your local Sigfox Network Operator for a connectivity quote.
